EXECUTIVE SUMMARY

01 // PROFILE

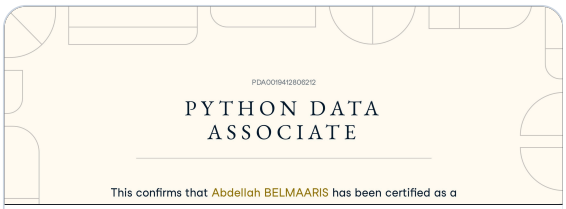

Performance-driven Full-Stack Software Developer operating at the intersection of enterprise backend architecture, AEC digital engineering, and applied artificial intelligence at BIMPulse. Specialized in engineering high-throughput Python/Django REST backends, normalized PostgreSQL schemas, and modern responsive React/TypeScript interfaces. Proven track record in eliminating severe N+1 database bottlenecks down to constant O(1) query time and architecting granular 14-role Role-Based Access Control (RBAC) engines. Certified by DataCamp in Applied AI Engineering (LLMs, RAG Architectures) and Python Data Analytics.

VERIFIED CREDENTIALS

04 // CERTS

AI Engineer for Developers Associate
DataCamp — Apr 2026 – Apr 2028
ID: AIEDA0011678564836

Python Data Associate
DataCamp — Feb 2026 – Feb 2028
ID: PDA0019412806212

PROFESSIONAL WORK EXPERIENCE

02 // CAREER

Junior Full-Stack Developer

AUG 2026 — PRESENT

BIMPulse • Casablanca, Morocco (Apprenticeship) · AEC & Digital Engineering Solutions

- Engineered and deployed core application modules for BIMPulse Academy, an enterprise digital training platform dedicated to Architecture, Engineering, Construction & Operations (AECO) professionals.
- Developed backend services and normalized PostgreSQL relational data models strictly adhering to international BIM / IFC digital engineering standards.
- Engineered scalable REST APIs in Python & Django paired with modular, mobile-responsive user interfaces.
- Modeled normalized PostgreSQL schemas and optimized database transactions for high-traffic student enrollment flows.
- Formally commended by senior engineering leadership on LinkedIn for architectural milestones and technical contributions to platform delivery.

Django & Backend Systems Developer

MAY 2026 — AUG 2026

Self-Directed & Production Systems · Casablanca, Morocco · Enterprise Web Platforms

- Architected enterprise-grade Role-Based Access Control (RBAC) supporting 14 discrete user roles with granular permission matrices and security auditing.
- Eliminated severe N+1 query bottlenecks using eager loading (`select_related` and `prefetch_related`), reducing database roundtrips to constant O(1) query time.
- Integrated automated transactional emails, custom full-text search indexing, and resilient structured application logging.

Python Developer & Data Systems

JAN 2020 — PRESENT

Systems Engineering & Automation · Core Codebases & Open Source

- Constructed automated high-throughput data processing pipelines, unstructured server log tokenizers, and computational algorithms in Python 3.12.
- Authored a production-grade software library implementing classical Gang of Four (GoF) design patterns with 100% pytest test suite coverage and clean dependency injection.

Web Developer — Full-Stack Applications

FEB 2023 — JUN 2026

Full-Stack Application Development · Casablanca, Morocco

- Engineered full-stack web applications translating functional requirements into modular backends and responsive user interfaces.
- Developed The Modern Journal CMS, a scalable publishing platform featuring multi-user roles, live readership analytics telemetry, and responsive typography.

Web Development | Django | Bootstrap 5 | HTML5 / CSS3 | REST APIs
